Weekly Report 4 due February 2, 2016

This week was a bit slow in terms of experimentation, mostly due to my obligations outside of this course. I did, however, finally get around to ordering my necessary parts (although I wasn't able to design the robot chassis in SolidWorks like I had planned). This weekend will hopefully be a very productive one as a large number of my parts arrive by Friday of this week.

As far as the parts that I ended up ordering, you can find the spreadsheet below (note that the prices listed were to the first prices that I found. After some bargain hunting, I was able to get the total price down to around \$250)

Item	Quantity	Price
Turnigy D3536/6 1250KV Brushless Outrunner Motor	4	\$81.36
Turnigy 2200mAh 3S 20C Lipo Pack	2 (just to be sure)	\$20
HobbyKing X-Car 45A Brushless Car ESC (sensored/sensc	4	121.84
Vex Robotics 6" Omni-Directional Wheel	4	91.96
Vex Robotics VersaHub (1/2" Hex)	4	35.96
Couplers	4	?

Total: \$351.12

After these materials arrive, all I'll need are the chassis and mounting materials and I believe that I'll be all set to begin prototyping. Here's hoping that the robot turns out great!
